

# Integrations

Seamless, Secure and Compliant Integrations

Businesses face challenges in exchanging files, records and messages seamlessly and securely across their range of employee and customer facing systems. Secure message and file exchange solutions have traditionally contributed to the problem by adding complexity and creating additional silos of data.

## SMART, SECURE DATA EXCHANGE

DataMotion transforms data exchange and user experience using no-code and low-code methods. Our robust suite of RESTful APIs offers extensive endpoints enabling developers to customize interactions to meet a diverse set of needs across the organization.

Our DataMotion Integration Gateway (DIG) is integral to this process. DIG enables secure content to be integrated into enterprise applications, allowing employees to operate within the system while ensuring data security.

By merging these APIs with DIG and standards-based protocols, we enable enterprise platforms, including Salesforce, Genesys, and Microsoft 365, to exchange sensitive data, dissolving data silos. We also provide extensive integration with Identity Providers (IdPs), enhancing user experience, security and accessibility.

By prioritizing zero trust, streamlined user authentication and simplified access management, DataMotion enhances productivity and compliance. Our enterprise-grade solution provides an extensible set of integrations and a comprehensive feature set, meeting your current needs and providing the headroom to be a strategic part of your future strategy.

## FEATURED INTEGRATIONS

## BENEFITS

1

### Seamless Integration

DataMotion seamlessly integrates with existing systems, enhancing efficiency and productivity by eliminating the need for complex migrations or disruptions in workflows.

2

### Zero Trust Design

Our encryption technologies and stringent compliance standards ensure data integrity and confidentiality, mitigating the risks of unauthorized access or data breaches.

3

### Secure Channel

DataMotion offers secure digital channels for chat, email, and file transfers, fostering trust and confidentiality in interactions with customers and partners.

4

### Scalability

Our robust architecture allows seamless scalability to handle growing data volumes and accommodate projects ranging from thousands to millions of users, ensuring continuous and reliable service.

5

### Certifications and Accreditations

We hold various certifications and accreditations, including HITRUST CSF®, EHNAC and DirectTrust™ accreditation, ensuring compliance with industry regulations covering PII, PCI, PHI, HIPAA and HITECH for the highest security and privacy standards.

### Increase Productivity and Efficiency

Seamless experience and the flexibility to integrate with additional applications without the need to replace existing solutions.

### Centralize and Secure Data Management

Our zero-trust, trust no one, trust nothing design ensures risk and compliance groups can rest easy.

### Enhance Customer Satisfaction

Transparent security provides quick data exchange through integrations, allowing users and systems to share data securely in ways that are most natural to them.
