MESSAGES

Organizations face challenges securely exchanging files, records, and messages between their various systems and apps. Legacy secure message and file exchange solutions have only added to the complexity and created more data silos. This ineffective digital strategy negatively impacts the user experience and stifles innovation.

Smart Secure Data Exchange and Integration

Rapidly elevate your digital strategy and seamlessly enable secure exchange to delight your users and improve healthcare outcomes. DataMotion streamlines data exchange and integrates with technologies used by payers, providers, and partners through no-code and low-code methods. Our approach uses plug-ins, RESTful APIs and secure standards-based protocols to enable uninterrupted data flow. It also eliminates silos, and connects clinical systems such as Virtual Health and Value Based Care Platforms, and back-end office systems including Salesforce, Genesys and Teams. Our integrations also allow customer-facing apps and portals to participate in secure data exchange, streamlining workflows while also enhancing convenience and ease of use.

Integrated Data Exchange

Securing and simplifying your healthcare workflow

- **Increase Productivity**

The DataMotion platform can easily address current and future needs, offering seamless scalability and the flexibility to rapidly integrate with future workflows and applications as your needs evolve.

- **Centralize and Secure Data Management** Our

Trust No One, Trust Nothing design and highly detailed activity logging, ensures risk and compliance groups can rest easy.

- **Enhance Customer Satisfaction**

Our platform's built-in and transparent security allows for quick and secure exchange of sensitive data through integrations that allow employees, applications, partners, and customers to participate in ways that are most natural to them.

Use Case

DataMotion's HISP solution streamlined the secure and efficient processing of millions of COVID-19 eCRs by handling bi-directional Direct Messaging exchange with healthcare systems across the nation. This allowed Public Health and the CDC to gain visibility of the pandemic and allocate resources to protect the country.

About Us

DataMotion enables organizations to leverage no-code and low-code experiences to quickly and efficiently integrate secure clinical exchange into their workflows. Our platform includes a wide range of RESTful APIs and standards-based protocols that seamlessly integrate disparate systems and applications. This allows clinical and back-office systems including EHRs, HIEs, mHealth apps, CRMs and contact centers to securely exchange sensitive data to support their customers, partners, and vendors using convenient secure digital methods.

“Sometimes you venture into projects that don't work, and money is lost. DataMotion accomplished what others simply could not. They did this Proof of Concept without strings attached; that's how confident they were. Just two weeks into this trial, we all knew we had a messaging platform that could integrate everywhere and that was exactly what we wanted – and more.”
