

Trusted HISP Services for Interoperable Clinical Data Exchange

Health data exchange is a challenge today and growing in complexity each year with many healthcare organizations still relying on disparate systems that cannot seamlessly communicate. This results in fragmented patient care, inaccurate and inefficient public health reporting, and increased costs. The need for interoperability has never been greater and requires a HISP that offers a comprehensive, modern approach to address the agility, connectivity and scalability required for mission-critical data exchange.

THE GOLD STANDARD FOR CLINICAL DATA EXCHANGE

DataMotion is a leader among HISPs, providing secure data exchange for customers in regulated industries for over two decades. As a founding member of DirectTrust™, we bring deep experience operating as a HISP for many of the most demanding healthcare organizations. We supplement this with experience gained from enterprises in other regulated industries including those in financial services and government, allowing us to bring a more robust, holistic and modern approach to your digital modernization efforts. Our accredited HISP, CA and RA services leverage full lifecycle RESTful APIs, secure standards-based protocols and a Trust No One, Trust Nothing design to enable simple, secure PHI exchange that allows employees, applications, partners, and customers to participate in ways that are most natural to them.

Robust Data Processing

The DataMotion Platform handles the most demanding, mission-critical tasks and securely processes millions of records per day in a Zero-Trust manner.

Vast Exchange Network

Our healthcare provider directory enables access to all 2.7 million DirectTrust addresses across nearly 300,000 organizations and over 5.3 million NPI addresses.

Dependable Clinical Data Availability

Our HISP services are highly reliable, with 99.9% uptime and built-in redundancy and fail-over to ensure that clinical data is always available where and when it's needed.

Proactive Monitoring

24/7 network monitoring, testing, and support keep communications running smoothly. In addition, we monitor overall communications across HISPs, reporting and resolving detected issues.

Analytics and Reporting

Analytics and reporting provide message tracking and a comprehensive view of system performance.

Seamless Workflow Integration

Full lifecycle RESTful APIs and protocols enable seamless rapid scalability, automated provisioning and user management, and integration with clinical and non-clinical workflows as well as scaling for the largest cloud-based projects.

Certifications and Accreditations

DataMotion is HITRUST CSF® Certified and our HISP, CA and RA services are fully accredited by EHNAC and DirectTrust. Our verifiable compliance includes HIPAA and HITECH.

WHY DATAMOTION?

DataMotion enables organizations to leverage no-code and low-code experiences to quickly and efficiently integrate secure clinical exchange into their workflows. Our platform includes a wide range of RESTful APIs and standards-based protocols that seamlessly integrate disparate systems and applications. This allows clinical and back-office systems including EHRs, HIEs, mHealth apps, CRMs and contact centers to securely exchange sensitive data to support their customers, partners, and vendors using convenient secure digital methods.

Amplified by artificial intelligence, our solutions promise significant cost reductions, increased efficiency, and rapid data delivery. We have spent over two decades refining our security measures, including robust military-grade encryption that follows a zero-trust approach, ensuring the highest compliance and data protection levels.

“DataMotion delivers the best scalable solution on the market. We deal with data from over 2,500 hospitals and 50,000 healthcare professionals, and we have some of the largest nonfederal healthcare databases. We rely on DataMotion to keep our communications safe and to ensure that our client’s data is not compromised.”
